SEO and GEO/AEO Audit: alys-thorne-site.vercel.app

Nov 8, 2026 · @Marie

Scope and verdict

The site is about 50% there for SEO and about 40% for GEO/AEO, and the audit is partial. I read the homepage, Books, About, Contact and Blood Awakens pages.

The fetch tool blocked `robots.txt`, `sitemap.xml` and `llms.txt`, because no page I had seen linked to them. It also shows only meta tags and page text, not JSON-LD. Anything about those files or about schema is marked unverified below.

Critical issues

Three problems stop pages from being indexed or ranked cleanly.

1. **The Books page canonical points to a different site.** Its canonical, `og:url` and `og:image` all use `marieibay.github.io/alys-thorne-site/`. That tells Google the Vercel Books page is a duplicate of the GitHub Pages copy, so it may never rank. Change them to `https://alys-thorne-site.vercel.app/books`. Check whether the GitHub Pages site is still live; if it is, redirect or unpublish it.
2. **Most pages have no canonical tag.** Home, About and Blood Awakens show none. Only Contact has a correct one.
3. **Internal links trigger redirects.** The nav and footer link to `/books.html`, `/about.html` and so on, but the server resolves them to `/books`, `/about`. Every click or crawl takes an extra hop. Contact already uses the clean URLs. Update the nav, footer and in-page links on all other pages to match.

SEO gaps

Social tags are the biggest gap: they are complete only on Contact.

- **Social tags.** Home, About and Blood Awakens have no `og:image`, `og:url`, `og:site_name` or `twitter:card`, so shares show no preview image.
- **`og:type`.** Every page says "website". Book pages fit `book` better, and About fits `profile`.

- **Meta descriptions.** Home and About use the identical sentence. Write a distinct one per page.
- **Homepage H1.** It is the author name plus the tagline. "Alys Thorne — Dark Romantic Fantasy Author" would match searches better.
- **Placeholder text.** The live homepage shows "Demo mode — set `newsletterAction` …", and the signup does not work. Connect Kit, Mailchimp or Buttondown, or hide the form until you do.
- **Footer links.** Home and Blood Awakens link to Amazon and Goodreads search pages. Link to your Amazon and Goodreads author pages instead, as Books and Contact already do.
- **Alt text.** Cover and portrait images are good. The Lore tiles have empty alt text and need a description.
